SUMMARY

As a computer engineer with a strong focus on game development, I have hands-on experience in AAA game development, working with in-house engine technologies at IO Interactive. This experience enhanced my ability to adapt to proprietary systems and deepened my interest in low-level programming and engine architecture. I thrive in both collaborative environments and independent work, continuously growing my skill set through challenging personal projects, including the development of Luden Engine, and industry exposure.

EDUCATION

Bachelor in Computer Engineering

Yildiz Technical University

10/2022 Present Istanbul, Turkey

Bachelor in Computer Engineering(Erasmus)

Czech Technical University in Prague

02/2024 06/2024 Prague, Czechia

PROJECTS

Luden Engine(2D Game Engine)

A comprehensive C++ game engine project focused on production-ready systems and engine architecture.

- ECS architecture:** Entity component system with data-oriented design principles for optimal performance.
- Performance optimization:** Cache-friendly data structures and memory management.
- Future goals:** Expanding to 3D rendering capabilities and a production-ready feature set.
- Key Takeaways:** Deep understanding of engine architecture, low-level systems, and performance-critical programming.

COOP TPS Base Defense Game(Unreal Engine)

Developed a co-op third-person shooter with tower and base defense gameplay mechanics.

- Gameplay:** Designed co-op base defense against zombie waves, prioritizing communication and resource management.
- AI & Animations:** Built zombie AI with behavior trees, custom hit reactions, and motion-matching animations.
- Unreal Engine Features:** Integrated networking, procedural generation, and Metahuman/Nanite for optimized visuals using Unreal Engine features.

RayTracer

Developed a raytracer using C++ based on the RayTracing In One Weekend series.

- Rendering Techniques:** Rendered core rendering features such as raysphere intersections, diffuse shading, and camera movement.
- C++:** Applied operator overloading and optimized C++ code for efficiency.
- Key Takeaways:** Gained practical experience in rendering fundamentals and low-level graphics programming.

EXPERIENCE

QA Student Assistant

IO Interactive

11/2024 - 09/2025 Istanbul, Turkey

- Selected for IO Interactive's Future Devs program, an initiative designed to nurture Turkey's next generation of game developers through hands-on experience and mentorship.
- This program allows students to gain realworld exposure to AAA game development, working closely with industry experts.
- Executed daily tests and test plans for features, ensuring game stability.
- Developed ImGui-based visualizer tools for programmers to debug and monitor game systems.
- Created Python automation tools to improve QA team efficiency and workflow.

Game Development Coordinator

YTU DOGDOK

06/2024 - 06/2025 Istanbul, Turkey

- Organized and hosted Kramer Jam, a large scale game jam event for the university community.
- Managed tours to industry-related companies and events.
- Organized and participated in the "Let's Know the Roles" series, featuring insightful talks with industry professionals.

Sponsorship Coordinator

YTU DOGDOK

06/2023 - 06/2024 Istanbul, Turkey

- Coordinated sponsor negotiations for the university-wide YTU Digital Gaming Days

SKILLS

Unreal, C++ , C, Java, Networking, 3D Character Art, Texturing, Substance Painter 3D, Assembly
