SUMMARY

As a computer engineer with a strong focus on game development, I have hands-on experience in AAA video game development, working with in-house engine technologies at IO Interactive. This experience enhanced my ability to adapt to custom systems and deepened my interest in low-level programming and engine architecture. Therefore, I developed my own 2D game engine called Luden Engine.

EDUCATION

Bachelor in Computer Engineering

Yıldız Technical University

10/2022 Present Istanbul, Turkey

Bachelor in Computer Engineering(Erasmus)

Czech Technical University in Prague

02/2024 06/2024 Prague, Czechia

PROJECTS

Luden Engine(2D Game Engine)

A general purpose C++ game engine project focused built on custom ECS entity system.

- ECS architecture:** Entity component system with data-oriented design principles for optimal performance.
- Performance optimization:** Cache-friendly data structures and memory management.
- Key Takeaways:** Deep understanding of engine architecture, low-level systems.

COOP TPS Base Defense Game(Unreal Engine)

Developed a co-op third-person shooter with tower and base defense gameplay mechanics.

- Gameplay:** Designed co-op base defense against zombie waves.
- AI & Animations:** Built zombie AI with behavior trees and motion-matching animations.
- Unreal Engine Features:** Integrated networking, procedural generation, and Metahuman/Nanite for optimized visuals.

RayTracer

Developed a raytracer using C++ based on the RayTracing In One Weekend series.

- Rendering Techniques:** Rendered core rendering features such as raysphere intersections, diffuse shading and camera movement.
- Key Takeaways:** Gained practical experience in rendering fundamentals.

EXPERIENCE

Software Engineer Intern

IO Interactive

11/2024 - 09/2025 Istanbul, Turkey

- Worked on 007: First Light and Project Fantasy
- Selected for IO Interactive's Future Devs program, an initiative designed to train Turkey's next generation of game developers through hands-on experience and mentorship. This program allows students to gain realworld exposure to AAA game development, working closely with industry experts. .
- Developed C++ ImGui-based visualizer tool for AI Programmers to debug and monitor the AI Decision Making Architecture for 007: First Light.
- Created Python automation tools to improve QA team efficiency and workflow.

Game Development Coordinator

YTU DOGDOK

06/2024 - 06/2025 Istanbul, Turkey

- Organized and hosted Kramer Jam, a largescale game jam event.
- Managed tours to video game industry-related companies and events.
- Organized and moderated the "Rolleri Tanıyalım/Sektörün Dev'leri" series, featuring insightful interviews with industry professionals.

Sponsorship Coordinator

YTU DOGDOK

06/2023 - 06/2024 Istanbul, Turkey

- Coordinated sponsor negotiations for the university-wide YTU Digital Gaming Days

SKILLS

Unreal, C++, Assembly, C, Java, Networking, 3D Character Art, Texturing, Substance Painter 3D
