SUMMARY

Systems-oriented game programmer with hands-on AAA experience at IO Interactive, where I worked on 007: First Light and Project Fantasy using their proprietary in-house engine. That experience sharpened my focus on low-level programming and engine architecture. These are the skills I now apply building Luden Engine, a C++20 engine with a custom ECS and data-oriented design, developed independently from scratch.

EDUCATION

Bachelor in Computer Engineering

Yıldız Technical University

10/2022 - 06/2026 Istanbul, Turkey

Bachelor in Computer Engineering(Erasmus)

Czech Technical University in Prague

02/2024 - 06/2024 Prague, Czechia

PROJECTS

Luden Engine(2D Game Engine)

General-purpose C++20 game engine built around a custom ECS and data-oriented design.

- Entity-Component System:** hand-built from scratch (not a third-party library like EnTT) to gain a deeper understanding of engine internals.
- Performance:** cache-friendly data layouts and manual memory management.
- Includes a full ImGui-based level editor and scene serialization.

COOP TPS Base Defense Game(Unreal Engine)

Co-op third-person shooter with tower/base-defense mechanics.

- AI & Animation:** zombie AI built with behavior trees, combined with motion-matching animation.
- Engine features:** networking, procedural generation, Metahuman/Nanite integration.

RayTracer

Developed a raytracer using C++ based on the RayTracing In One Weekend series.

- Rendering Techniques:** Rendered core rendering features such as raysphere intersections, diffuse shading and camera movement.
- Key Takeaways:** Gained practical experience in rendering fundamentals.

EXPERIENCE

Software Engineer Intern

IO Interactive

11/2024 - 09/2025 Istanbul, Turkey

- Worked on 007: First Light and Project Fantasy
- Built a C++ / Dear ImGui visualizer tool used by AI programmers to debug and monitor the AI decision-making architecture on 007: First Light.
- Selected for IO Interactive's Future Devs program, training Turkey's next generation of AAA developers through hands-on mentorship.
- Created Python automation tools to improve QA team efficiency and workflow.

Game Development Coordinator

YTU DOGDOK

06/2024 - 06/2025 Istanbul, Turkey

- Organized and hosted Kramer Jam, a largescale game jam event.
- Managed tours to video game industry-related companies and events.
- Organized and moderated the "Rolleri Tanıyalım/Sektörün Dev'leri" series, featuring insightful interviews with industry professionals.

Sponsorship Coordinator

YTU DOGDOK

06/2023 - 06/2024 Istanbul, Turkey

- Coordinated sponsor negotiations for the university-wide YTU Digital Gaming Days

SKILLS

C++(C++20), C, C#, Java, Python, Data-Oriented Design, ECS, Assembly, Unreal Engine, Unity, Git, Perforce, Premake/Cmake

LANGUAGES

Turkish
